

ECO COMMERCE TRAINING AND EDUCATION

Brought to You by Chamber of Eco Commerce

Banking on Eco Commerce

We survey critical issues and source Eco Innovations. We assess technology, develop projects, and teach concepts to accelerate transfer knowledge and technology, and to build and reinforce technical skill in a series of collaborative lectures.

We build an individual's understanding of Eco Innovation and Commerce. We are dedicated to helping individuals solve problems, and contribute to critical challenges through Eco Innovation.

With our vast experience, expertise, knowledge, and contacts, we are in the perfect position to bring Eco Innovation and Commerce to the fingertips of suppliers, end-users of technology, and investors seeking the 'next-big-thing'.

We reach individuals and organizations through a fast growing international network of regional Eco Commerce Hubs, strategically positioned worldwide. We offer expert-led in-depth support to our stakeholders, customers, and investors.

We provide an independent science-based view and key insight to Eco Innovation., and believe that education and training is a key to success in Eco Commerce.

We advance interest and in-depth understanding of Eco Innovation and joint decision making, while at the same time we work together creating and managing high-impact projects. Together, we strengthen the advising field to effectively serve individuals and organizations across the developed and developing world.

Our Approach

Most technology lectures are educational. We do not just educate our stakeholders, prospective customers, and investors, we invest in Eco Technology and we sell it. Suppliers, customers, and investors hire us to educate them.

Before we make a presentation, we know what the prospect's specific challenges and/or needs are. Knowing what they are allows us to develop and present customized solutions and customized portfolios of eco innovations that will respond to their specific needs, and solve their problems.

BANKING ON TRAINING AND EDUCATION

Brought to You by Chamber of Eco Commerce

This is precisely how we make the presentation

The first step in the presentation is to go over the challenges and needs to make sure they are there and causing problems.

The second step is to present the solution for challenge number one. Then we ask, did this solution solve the problem? If it did, we move on to challenge two.

We continue in this manner until we have presented an opportunity, or a solution for each challenge. Now we ask the prospect what she/he would like to do next. We wait until we get an answer.

That really is all there is to a CEC presentation. We do not just answer questions, we learn and understand the challenges and opportunities, and how our solution would create an opportunity, or make the problem go away.

We do not just educate, we invest in and sell solutions to customers. Customized solutions sell - educational lectures will create new projects.

To join us, please contact your regional Eco Commerce Hub, or contact us by email: info@ChamberofEcoCommerce.com
